

United States Department of the Interior
National Park Service**National Register of Historic Places Registration Form**

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in National Register Bulletin, *How to Complete the National Register of Historic Places Registration Form*. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions.

1. Name of PropertyHistoric name: RotherwoodOther names/site number: DHR ID 087-0045Name of related multiple property listing: N/A

(Enter "N/A" if property is not part of a multiple property listing)

2. LocationStreet & number: 15410 Southampton ParkwayCity or town: Capron State: VA County: SouthamptonNot For Publication: ☐ N/A Vicinity: ☐ N/A**3. State/Federal Agency Certification**

As the designated authority under the National Historic Preservation Act, as amended,

I hereby certify that this X nomination request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60.

In my opinion, the property X meets does not meet the National Register Criteria. I recommend that this property be considered significant at the following level(s) of significance:

 national statewide X local

Narrative Description

(Describe the historic and current physical appearance and condition of the property. Describe contributing and noncontributing resources if applicable. Begin with a **summary paragraph** that briefly describes the general characteristics of the property, such as its location, type, style, method of construction, setting, size, and significant features. Indicate whether the property has historic integrity.)

Summary Paragraph

Rotherwood is an early nineteenth century agricultural estate and former plantation that retains a high degree of architectural integrity associated with its period of significance. The property is located in rural Southampton County off Southampton Parkway (Highway 58) in southeast Virginia. The boundaries of the property encompass a 58-acre portion of the current tax parcel that contains the known historic resources and confirmed archaeological sites. The larger current parcel itself, at 197 acres, is a portion of the original agricultural estate, and is situated approximately three miles west of the town of Capron, Virginia. The property is not visible from Highway 58, and is accessed via a winding dirt and gravel road. Primarily surrounded by farmland, the core of the property is situated in a smaller rectangular, landscaped area that is accessed by a long, tree-lined dirt driveway branching off from Southampton Parkway. Rotherwood consists of an intact, early-nineteenth-century, Greek Revival dwelling, surrounded by agricultural fields and retains at least one early-nineteenth-century outbuilding and several mid-twentieth-century agricultural outbuildings located to the north of the house. In addition to the dwelling and c. 1820 outbuilding, contributing resources include a c. 1900 shed, c. 1950 well, c. 1950 shed, c. 1970 machine shed, c. 1970 pole barn, and three c. 1970 grain bins, all of which are associated with the property's agricultural significance; Site 44SN0299 is a contributing site

Rotherwood
Name of Property

Southampton Co., VA
County and State

due to its association with the enslaved workforce at Rotherwood and the artifacts that have been recovered through minimal professional testing. Noncontributing resources consist of a c. 1990 lean-to, a c. 1950 barn rebuilt c. 2007, and a c. 1980 bell pole. The main house is set apart from the outbuildings and sits on a hill overlooking the fields southeast of the driveway. The main yard is enclosed with a modern brick wall to the northwest and northeast, a post and wire fence to the southeast, and a line of trees to the southwest behind the house. On the southern end of the boundary just before the open fields turn to wooded forest is a contributing archaeological site that has been documented as the potential location of former dwellings for enslaved persons.

Narrative Description

Setting

Rotherwood is located in rural Southampton County off Southampton Parkway in southeast Virginia. Part of an expansive rural landscape, the areas surrounding the property largely consist of farmland and other agricultural resources. The property is not visible from the road, as the core of the property is situated in a smaller rectangular, landscaped area that is accessed by a long, tree-lined dirt driveway branching off from Southampton Parkway. Located southeast of the driveway, the house sits on a large, rectangular grass hill overlooking mostly flat farmland to the northeast. The main yard is partially enclosed with a brick wall constructed ca. 2021-2022 along the east and north yards, while a post-and-wire fence encloses the south and west sides of the main house yard. Openings along the north brick wall provide access to the outbuildings and driveway. Within the main yard, small bushes are situated around the perimeter of the house and frame the small brick walkway connecting to the front steps of the house. A bell, situated on a large wood post, is located in the western corner of the yard. Additionally, the well is located northwest of the house within the main yard. A narrow grassy area, with bushes and small trees, surrounds the perimeter of the main yard, and large cultivated fields are also located around the core of the property.

The outbuildings, although located in close proximity to the house, are clustered in a separate larger area at the end of the driveway and north of the house. A curved dirt road runs through the main area providing access to each of the outbuildings. Although the layout of the outbuildings is irregular, they are largely situated on either side of the dirt road and are all loosely contained within the same rectangular area which is bordered by a row of trees to the northeast and southwest. Uncultivated grass fields are located beyond to the north. Wooded areas located beyond the house, outbuildings, and immediate farmland, largely obscure the property to the south, west, and along the road to the north. Although a few of the outbuildings on-site have been lost, the setting largely remains unchanged.

County and State

A. Main House (c.1809, ca. 1820, ca. 1851-52) – Contributing Building

Oriented toward the east, the main house is a two-story, five-bay, rectangular, wood-frame, Greek Revival-style plantation house. Typical of many extant early nineteenth century dwellings in the area, Rotherwood's primary residence is an evolved resource that was constructed in phases. Physical and documentary evidence suggests that the earliest phase of construction began as early as 1809. Between 1809 and 1820, a one-story addition was constructed on the north end of the house. In 1851-1852, the house was again enlarged and remodeled. The house's mid-nineteenth century Greek Revival features present today most likely date to this third phase of construction.

Exterior

The main house has a brick foundation, wood weatherboard siding, and a hipped, metal standing-seam roof with a simple molded cornice. There are two interior-end brick chimneys, with corbeled caps. Windows largely include six-over-six, double-hung, wood-sash with wood sills and paneled wood shutters. Windows on the first story are taller. Typical of the style, the five-bay east façade is balanced with symmetrically-placed windows flanking a central portico entry. With its Doric columns and full entablature, the one-story, one-bay portico is consistent with typical vernacular interpretations of Greek Revival design in the area. Slightly raised, the portico has a brick foundation and wood decking, and is accessed by brick steps. Photographs taken of the house in 1937 show two large columns supporting either side of the porch, but by 1973, only the two remaining columns were extant. The porch has a flat, standing-seam metal roof and full entablature, with a simple molded cornice, a wide frieze band with a row of tiny dentils, and plain architrave, and is supported by fluted Doric columns and Doric pilasters. The main entrance features a single-leaf, four-panel wood door and screen door set within an architrave trim surround highlighted by multiple-light rectangular transom and sidelights with wood tracery in an "X" pattern and, below the sidelights, wood panels.

The north and south two-bay side elevations feature asymmetrically-placed windows. At its west corner, the south elevation has a single-leaf, four-panel, wood entry door set under a narrow, one-story porch. Supported by square, wood, Doric columns and pilasters, the porch has a simple entablature and a hipped, standing-seam metal roof. Wood panels enclose the lower portion of the sides of the porch, which has a brick foundation, wood decking, and is accessed by brick steps. Due to severe deterioration of the wood decking, modern wood decking has been temporarily applied over the historic decking. On each side elevation, the windows directly abut the east corner board, leaving no room for a shutter on this side.

The rear, or west, elevation is similar to the layout of the façade with the exception of an additional first-story entrance and a larger porch. The three-bay, one-story porch is supported by simple, square, wood columns and has a simple frieze and cornice with a flat, standing-seam metal roof. The porch has a brick pier foundation that has been infilled with concrete block, wood decking, and is accessed by brick steps. Physical evidence suggests that the rear porch was

Rotherwood
Name of Property

Southampton Co., VA
County and State

added at a later date. Set within a simple flush wood surround, the centered rear entrance features a single-leaf, four-panel wood door and screen door with flanking by three-light sidelights, both of which have a lower wood panel. The left-of-center, single-leaf entrance, which directly accesses the kitchen to the northwest, has a four-panel wood door and screen door set within a simple flush wood surround.

Interior

The interior of the main house has a double-pile, central hall plan on the first and second floor, with two rooms on each side of the central hall. The first floor features a central passage plan flanked by two rooms on either side. A small half-bath was added in the location of a former closet at the far southeast corner of the house. Each room features a fireplace with a Greek Revival wood mantel that has engaged Doric pilasters, a wide, plain frieze with a molded cornice, and a plain shelf. The fireboxes have been enclosed and converted to gas in all rooms.

The wide central hall, which is accessed by entrances at the front and rear of the house, features an open-well staircase with a mid-level landing in the hall's southwest corner. The wood, open-string staircase has a Victorian-era large decorative, turned newel post at the base, turned balusters of the same period, and a handrail with rounded edges.

On the second floor, a full bathroom is located at the east end of the hall directly above the front entry, in the location of a former cloak or storage room. Bedrooms flank the second-floor hall, with the two larger bedrooms located at the front (east) side of the house.

Historic materials include wide plank wood floors, plaster walls, and plaster ceilings on the first floor. Prior to 2005, sheetrock was applied over the existing ceiling and then replastered in the second-floor bedrooms. Trim includes tall, simple baseboards consistent with the Greek Revival style and decorative wood architrave trim around the doors and windows. The first-floor central hall, parlor, and kitchen each feature a deeply reeded, plaster crown molding. Door surrounds along the first-floor central hall also feature simple corner blocks. The windows all have decorative wood window sills, and the first-floor windows also have decorative wood panels extending to the floor below each window. Overall, the floors, walls, ceilings, and majority of trim appear to be in good condition with only some minor plaster cracks and wood trim deterioration as a result of what appears to be water damage. Interior doors throughout the house include large four-panel wood doors accessing the rooms and narrow two-panel wood doors accessing closets. Large pocket doors likely once divided the parlor and kitchen, but the opening has been narrowed to a single door opening. Decorative trim marks the former opening. The majority of the doors retain their rim locks; however, some have been replaced with polished brass knobs. Central heat and air conditioning have been added.

B. Outbuilding 1 (c.1820) – Contributing Building

Outbuilding 1 is a one-story, wood frame building with a steeply pitched gable roof covered with standing seam metal surrounded by pent-roof lean-tos on all elevations. The lean-to shed

Rotherwood
Name of Property

Southampton Co., VA
County and State

additions were constructed by the early twentieth century, and are largely open and supported by a mixture of round logs and square posts. The core of the building has a brick pier foundation, supporting hewn sills and rough-cut log joists. The exterior has been almost entirely reclad with circular sawn (or later) wood weatherboard siding. On the south façade, however, a portion of the original beaded weatherboard is extant on the top half of the wall. This weatherboard retains wrought nails and shows evidence that the building was once whitewashed on the exterior. The primary entrance is located on the south elevation and a double-sheathed wood door with strap hinges hangs in the opening. On the rear (north) elevation is an opening with a four-panel door likely reused from an area of the Rotherwood main house.

Partially exposed wall framing on the north elevation reveals sash or pit sawn framing. The interior walls have been covered with modern drywall or plywood. The ceiling features tongue and groove boards with smoothly finished and beaded joists. The floor has been covered with modern carpet. Based on the presence of detailed finishes such as the beaded ceiling joists, beaded weatherboard, and whitewashing, this outbuilding may have served an important purpose on the landscape, or was highly visible to visitors. While oral tradition has asserted that this building once may have served as a secondary dwelling, no evidence of a chimney or heating source was found during the fieldwork. Without a chimney, it is unlikely that the building served as a dwelling.

C. Well (c.1950) – Contributing Structure

This well structure, which is no more than three feet in height, has a concrete block foundation and walls. It is capped by a wood-framed side-gable roof clad in asphalt shingles that appears to be removable.

D. Shed (c.1900) – Contributing Building

This one-story, one-bay, wood-frame, shed has wood clapboard siding and a front-gable, metal, standing-seam roof with boxed, overhanging eaves on the sides. The foundation is not visible. The façade, or northeast elevation, features a single board-and-batten door with strap hinges. A single wood-framed window opening, which has been covered, is located on the southeast elevation. The building, which has significant vine growth from the roof and vegetation along the side, is currently in poor condition with numerous deteriorated siding boards.

E. Lean-to (c.1990) – Non-contributing Structure

Similar to a pole barn, this one-story, rectangular structure is supported by three large wood posts on each side and in the center. It has a shed, metal-standing seam roof with exposed rafters and rafter tails.

F. Metal Machine Shed (c. 1970) – Contributing Building

This large, one-story, one-bay metal machine shed has a concrete foundation, all-purpose vertical metal siding, and a flat metal roof. The façade, or northwest elevation, features a large sliding

Rotherwood
Name of Property

Southampton Co., VA
County and State

loading door. A metal-framed opening, which has been covered, is located on the northeast elevation. A shed lean-to, with wood support posts and a corrugated metal roof, is appended to the southwest elevation.

G. Pole Barn (c. 1970) – Contributing Structure

The wide one-story, one-bay pole barn has a front-gable, metal standing-seam roof with metal cladding on the gable face at each end. It is supported by square wood posts on each side that are connected via cross brace framing for extra support. An open structure at each end, the roof rafters remain exposed.

H. Barn (c.1950, c. 2007) – Non-contributing Building

This rectangular, one-story wood frame barn consists of an enclosed section with an open pole barn attached to the front. The building, likely constructed in the mid-twentieth century was damaged after c. 1994, and the front portion of the building was demolished and the new open section appended to the front of the building. The building rests on a concrete block foundation, has deteriorated wood siding, and a metal, standing seam roof. The pole barn addition is supported by wood posts and has exposed rafters. Overall, the building is in poor condition with severe deterioration to the wood siding, missing siding boards, and close and in-grown vegetation negatively impacting the materials and stability.

I. Corrugated Metal Shed 2 (c.1950) – Contributing Building

This one-story, one-bay shed has a concrete foundation, plywood siding covering corrugated metal, and a front-gable, corrugated metal roof with boxed eaves. A tall, double-leaf entrance is located on the northwest elevation; cut-out window openings flank the entrance. Overall, the building is in poor condition with several holes in the siding and deterioration of the plywood and roof material.

J. Metal Grain Bin 1 (c.1970) – Contributing Structure

K. Metal Grain Bin 2 (c.1970)— Contributing Structure

L. Metal Grain Bin 3 (c.1970)— Contributing Structure

These three, circular silos have corrugated metal siding and a conical metal, v-crimp roof. Each has a roof ladder attached and a central, circular lid, as well as another oval lid on the side of the roof. Each also has a narrow, metal access door on the side.

M. Bell Pole (c.1980) – Non-contributing Object

A metal bell tethered to a rope sits atop a square wood post. The bell appears to be historic, but it is unclear where it was originally used and if it is associated with Rotherwood historically.

Rotherwood
Name of Property

Southampton Co., VA
County and State

N. South Field Archaeological Site (44SN0299) – Contributing Site

The South Field (44SN0299) is located approximately 300 feet south of the main house in an open agricultural field just north of the wooded portion of the parcel. Limited archaeological investigation consisting of controlled surface collection and archival research of the area took place conducted in 2010-2011. More than 500 artifacts dating from the late 18th century through the first half of the 19th century artifacts were collected. The artifacts are associated with the enslaved population that lived at Rotherwood. Artifacts collected were mapped, revealing a distinct pattern and concentration. The items collected, as well as the location downslope from the main house, suggests this area may once have been the location of slave dwellings. More intensive archaeological testing in the future may reveal additional features that could help better understand the history of the enslaved population at Rotherwood.

Integrity Analysis

Although several of the secondary resources have been lost and some changes have occurred over time, the relationships among the extant buildings are unchanged and the striking views of the rural landscape remain largely undisturbed. Thus, the present-day area associated with the historic Rotherwood retains its historic character. Although reduced in size, the property's boundary represents the physical area originally associated with the historic plantation house, adjacent agricultural buildings and fields, and historic landscapes and archaeological resources associated with the enslaved population, thereby retaining integrity of setting and location. The buildings and structures on the property retain the physical elements associated with their original design, including the general architectural features, form, and stylized elements. Additionally, the buildings largely retain their original historic materials. Therefore, the property retains integrity of design, materials, and workmanship. These factors, together with the documented history of the property, result in Rotherwood's high integrity of feeling and association as a nineteenth plantation that transitioned after the Civil War to respond to market forces and end reliance on an enslaved workforce. The undisturbed character of the property's domestic core and agricultural fields also are important considerations for potential further archaeological investigations that may occur. The presence of concentrations of artifacts in the South Field Archaeological Site (44SN0299) visible during surface inspection adds to the property's integrity of materials, feeling, and association.

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- ☒ A. Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ B. Property is associated with the lives of persons significant in our past.
- ☒ C. Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ D. Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

- ☐ A. Owned by a religious institution or used for religious purposes
- ☐ B. Removed from its original location
- ☐ C. A birthplace or grave
- ☐ D. A cemetery
- ☐ E. A reconstructed building, object, or structure
- ☐ F. A commemorative property
- ☐ G. Less than 50 years old or achieving significance within the past 50 years

Statement of Significance Summary Paragraph (Provide a summary paragraph that includes level of significance, applicable criteria, justification for the period of significance, and any applicable criteria considerations.)

Rotherwood is eligible for listing in the National Register of Historic Places under Criteria A and C at the local level of significance. Under Criterion A, Rotherwood is locally significant in the area of Agriculture as a well-preserved nineteenth century plantation that evolved into an agricultural estate following the Civil War, continuing commercial farming operations into the mid-twentieth century. The property retains a relatively high number of agricultural outbuildings, of which one of the most notable is the c. 1820 timber outbuilding; just one outbuilding, a shed, dates to c. 1900. The farm's twentieth century operations are represented more fully by the distinctive metal-clad buildings dating to the 1950s through early 1970s, a span that coincides with rapid mechanization and industrialization of large farms. Rotherwood is also locally significant under Criterion A in the area of Ethnic Heritage: African-American for its association with upwards of 100 enslaved persons who lived and worked on the property. Archaeological investigations on the property have located at least one site (44SN0299) in the property's South Field that has been minimally tested through surface inspection and has yielded artifacts that shed light on the lives of these enslaved individuals from the late eighteenth to mid-nineteenth century. Additionally, census, probate, and family documents provide insight regarding the enslaved population, as well as a relatively high number of named enslaved persons who lived at Rotherwood during the nineteenth century. The property is also locally significant under Criterion C in the area of Architecture for its collection of vernacular outbuildings, as well as the c. 1809-1851 Greek Revival-style main house. Although the main house was redesigned in 1851, the period of significance for Rotherwood begins in 1820, when the earliest extant outbuilding was constructed, and ends in 1972 because the property continued to operate as a working farm and retains agricultural outbuildings representative of significant twentieth century advancements in farming technology and machinery.

Narrative Statement of Significance (Provide at least **one** paragraph for each area of significance.)

In 1775, Southampton County native Thomas Ridley purchased 576 acres of land that later become known as Rotherwood from his uncle, James Ridley.¹ Soon after, in 1776, Ridley enlisted for service in the Revolutionary War and was appointed Captain of the 4th Virginia Regiment from Southampton County.² By 1778, Ridley was promoted to the rank of Major of the 10th Virginia Regiment of the Continental Line, which soon became the 6th Virginia Regiment as regiments were consolidated.³ During the war, Ridley is said to have exhibited great courage at the Battle of Brandywine, and empathy and kindness to a wounded British soldier.⁴ Although Thomas Ridley retired in 1783 with the rank of Major of the 1st Virginia Regiment, the

County and State

Governor of Virginia appointed Ridley as a Colonel of the Militia of Southampton County in 1785.⁵

Following his military retirement in 1783, Ridley returned to Southampton County where he became a planter and prominent member of Southampton County society. Due to his service in the Revolutionary War immediately following his purchase of the property, it is estimated that at this time the Rotherwood lands began to take shape as an agricultural estate. By the time of his death in 1815, the original 576 acres had been expanded to include over 3,500 acres.⁶ Upon his return home, Ridley served as a Justice of the Peace in 1784, and was elected as a Vestryman of St. Luke's Parish in 1785. The same year, Ridley was elected to the Virginia House of Delegates for Southampton County, a position he continued to hold until 1787. In 1790, he was elected to the Virginia state Senate and was re-elected to this position through 1800. Ridley was also an original member of the Society of the Cincinnati, a fraternal organization of Continental Army officers established in 1783 that selected George Washington as the organization's first President General.⁷

Although it is unknown exactly what crops were initially grown at Rotherwood, tobacco cultivation in Tidewater Virginia was beginning to decline in the late-eighteenth century, and most farmers in Southampton County had transitioned to growing grain crops like wheat and corn.⁸ Farmers within the county also dealt in hogs and timber as additional sources of income.⁹ Probate records from Colonel Thomas Ridley's death in 1815 indicate that he owned work horses, hogs, horned cattle, and sheep at Rotherwood. Tax records from the early nineteenth century also indicate that Ridley owned 40 enslaved African Americans. In his will, he named eight individuals: Lewis, Dick, Pompey, Robin, Hannah, Maggie, Dinah, and Cynthia. These enslaved persons were left to his wife, Amey; such bequeaths were common during the era of chattel slavery. Ridley also left his wife the "land and plantation whereon I now live." Amey died shortly after Thomas, and in 1815, their youngest son, Francis Ridley, inherited Rotherwood, the eight named individuals, as well as all of Ridley's unnamed enslaved persons.¹⁰

A graduate of William and Mary College, Francis Ridley served two terms in the Virginia House of Delegates between 1813-1815. Francis Ridley died only a few years later in 1822, leaving the

County and State

Rotherwood estate to his son Francis T. Ridley.¹¹ Francis T. (or Frank) Ridley attended Trinity College, and studied law at the University of Virginia. Unlike his father and grandfather, however, he did not practice law nor become a politician. Instead, he focused on agricultural production. By the mid-nineteenth century, Frank Ridley was one of 80 planters, defined as those owning more than 500 acres, in Southampton County. Frank married Elizabeth “Bettie” Norfleet Goodwyn in 1841, and the two had six children. In 1851-1852, Frank Ridley made substantial additions to Rotherwood’s main house, which doubled the property’s improvement value from \$1,000 to \$2,000.¹² The main house built c. 1809 during his father’s ownership, was expanded, likely to accommodate the large family, and remodeled with Greek Revival style elements popular during the mid-nineteenth century.

During the early-nineteenth century, farmers in Southampton County began diversifying their crops as repeated cultivation of wheat and corn depleted the soil of its nutrients. Additionally, a staple component of the majority of farms in Southampton County during this period was an orchard, typically apples and peaches, some of which was used to support the family and some sold for the creation of apple and peach brandy.¹³ Under Frank Ridley, Rotherwood consisted of 1,000 acres of agricultural fields, which produced crops including wheat, corn, oats, cotton, peas, beans, Irish potatoes, sweet potatoes, hay, apples, and peaches. Additionally, the plantation included livestock such as horses, mules, working oxen, dairy cows, cattle, sheep, and hogs.¹⁴ Frank Ridley also owned another 3,000 acres of unimproved woodland, which may have been used for lumber production, as was common in the county.¹⁵

Frank Ridley’s life as a “gentlemen farmer” and his vast landholdings were supported by the labor of enslaved African Americans. The number of enslaved persons that Frank Ridley owned increased considerably during the mid-nineteenth century from those individuals he had inherited as child. Frank also inherited six enslaved individuals from his father-in-law, William B. Goodwyn, in 1849. Court records indicate the names of these persons, along with their estimated monetary value, which totaled \$2,625, more than the Rotherwood house: Daniel (\$1,000), George (\$100), Clara (\$350), Liddia (\$400), Abraham (\$425), and Fanny (\$350). The high value assigned to several of these individuals, and especially Daniel, suggests that he was likely a very skilled laborer. The embodiment of personal wealth in enslaved people over other forms of property was typical for enslavers in Virginia. The combined efforts of the enslaved workforce resulted in high productivity and profits that paid for continued operations of the plantation as well as the lifestyles of enslavers and their families. By 1850, Ridley owned 74 enslaved persons, and by 1860, at least 102. Approximately 38 percent of the enslaved population at Rotherwood were children under the age of 16. The number of children present, as well as the population increase each decade, suggests that there may have been opportunities for the development of

family units, which led to natural increase of the enslaved population.¹⁶ Additionally, at least eight individuals over the age of 60 were recorded at Rotherwood, and several individuals lived well into their 80s and 90s.

Both the Riddleys and the enslaved individuals at Rotherwood likely felt the impacts of the nearby insurrection known as Nat Turner's Rebellion, which occurred in Southampton County in 1831. On August 21-22, 1831, Turner, along with a few dozen recruits, carried out the "bloodiest slave revolt in American history" just 50 miles southwest of the shipyard in Southampton County.¹⁷ Immediately following the revolt, which resulted in the deaths of 55 White people from various slaveholding families, widespread anxiety and fear swept Virginia, as well as other slaveholding states.¹⁸ In the fall of 1831, the Virginia Legislature received 40 petitions signed by approximately 2,000 Virginians calling for a range of actions from gradual emancipation of slaves to the complete removal of free and enslaved Black residents from the state. These petitions prompted the Virginia State Legislature to enter a debate regarding the manumission of slaves in January 1832.¹⁹ As historian William Freehling stated, "No other Southern state had such an extensive debate" regarding the subject of emancipation prior to the Civil War.²⁰ Ultimately, Virginia legislators decided to impart more strict laws and punishment aimed at restricting interactions and activities among free and enslaved persons of color. Laws restricted the movement and gathering of all Black Virginians, and severely limited their access to learning how to read and write. Black congregations continued to meet, but a White pastor had to be present at all times. Such restrictions were passed in most slaveholding states following Nat Turner's Rebellion.

The majority of the sites associated with Nat Turner's Rebellion were located to the south and east of Rotherwood. The close proximity makes it possible that the enslaved individuals on the property were approached, heard about, or were involved in the revolt; however, detailed documentation of the trials makes no mention of the Riddleys of Rotherwood. Although no documentary evidence has been uncovered to date to suggest that Rotherwood or the enslaved individuals residing at the property were in any way involved in Nat Turner's Rebellion, the

impacts of the event were felt far and wide. The event would have likely been discussed at length by the Ridleys, as their neighbors and family members dealt with the direct impacts and aftermath of the event. It is also likely that Frank Ridley discussed or in some way assisted his brother Thomas Ridley of Buckhorn Plantation—where Nat Turner and his fellow insurrectionists hid out on the night of August 22, 1831—following the rebellion and throughout the trials.²¹ Unfortunately, however, documentation of these encounters has not been uncovered to date. Such interactions with Southampton County neighbors, the Ridley family's status within the community, and the sweeping impacts of Nat Turner's Rebellion may have impacted White and Black relations at Rotherwood immediately following the insurrection.

Like many Antebellum enslavers, the Ridleys had complex relationships with the enslaved persons at Rotherwood, as well as paternalistic ideas about the institution of slavery. In 1861, William G. Ridley, the son of Frank Ridley, wrote to his family regarding his concern for those who had fallen ill at home, writing "I am uneasy here all the time, for when I hear of sickness at home, either in the black or white family, I want to be there."²² William Ridley also noted that the accommodations at Craney Island in November 1861 were "not as nice" as the slave quarters at Rotherwood. In 1862, Bettie Ridley wrote about walking over to see Peggy in her newly constructed, two-room dwelling, and visiting Nancy's baby. In 1858, Frank Ridley, who had inherited most of the enslaved individuals he owned, wrote of his concerns regarding the profitability of his Virginia plantation and the enslaved labor, and considered the potential financial benefits of moving his enslaved laborers to Texas.²³ While some of the family's contemporary accounts demonstrate a certain level of concern, care, and even community among Black and White individuals, Frank Ridley's letter serves as a reminder that the enslaved population at Rotherwood did not have the freedom to choose their circumstances and were exploited for their enslaver's financial gain.

As with many Virginia farms, the Civil War significantly altered the scale of the agricultural operations at Rotherwood. It does not appear that the impact of Emancipation was immediate, however. In 1871, Bettie Ridley wrote to friends that there were "as many slaves [*sic*] of the farm nearly as in the days of slavery... as many in our service as we wish... others occupying housing with the understanding that we command their labor when we want it."²⁴ It is unlikely that there were many opportunities for freedmen in Southampton County following Emancipation. The Ridley family letters and archaeological evidence suggest that African Americans continued to live and work at Rotherwood during the Reconstruction period, and

²¹ At least four enslaved individuals from Buckhorn Plantation joined the insurrection, and therefore, Thomas Ridley is mentioned a few times in the trials. Thomas R. Gray, *The Confessions of Nat Turner*, 1831, <https://docsouth.unc.edu/neh/turner/turner.html> (accessed 21 Dec 2022); "The Path of Nat Turner's Rebellion," Story Map, <https://uploads.knightlab.com/storymapjs/a22728634385fc4958eefc346a6d888c/path-of-nat-turners-rebellion/index.html> (accessed 21 Dec 2022).

some appear to have also become tenant farmers on the property, including Daniel Chapman.²⁵ By the 1880s, however, the Ridleys were cultivating only 31 acres at Rotherwood for corn and Irish potatoes, and 10 acres as an apple orchard. Many of the other cultivable acres were leased out in smaller tracts to other farmers. The loss of their enslaved workforce meant that the Ridleys may not have been able to keep the bulk of their land in production and the lowered production, in turn, likely was reflective of the economic stagnation that rural Virginia experienced after the Civil War. The Ridleys also sold cordwood from the property for additional income, while their livestock had dwindled significantly from their pre-war numbers.²⁶

The Ridleys' ownership history came to a close in 1883 when Robert J. Neely, Frank Ridley's son-in-law, sold the property to Dr. Joseph H. M. Sykes. Although details about the crops and agricultural operations at Rotherwood during the end of the nineteenth and into the twentieth centuries remain obscured, the land continued to be utilized for agriculture. An undated plat of Sykes Farm depicts the pattern of agricultural fields and woodlands at Rotherwood, as well as outbuildings and other resources that were possibly tenant farms.²⁷ Sykes owned Rotherwood until 1910. The property changed hands a few times during the early years of the twentieth century until purchased by William H. Vincent, one of the founders of the nearby town of Capron. While Vincent only owned the property for a short time before his death, the property passed to his wife Sarah E. Vincent in 1919. The property then passed through the Vincent family heirs to the Rawlings and Joneses through the end of the twentieth century, primarily following the female line until 1966 when Sara Rawlings Jones died, leaving the property to her husband, Darden W. Jones.²⁸

Darden W. Jones worked as a dentist in the town of Franklin for 45 years and was a prominent member of the community, serving on boards and holding leadership roles in various local social, business, and charitable organizations, and operating a 700-acre farm at Rotherwood. In 1946, Jones was elected to the City Council and served in this position for 28 years. While living at Rotherwood, Jones was elected as Mayor of Franklin in 1957, a position he held until 1974. During his tenure as Mayor, Jones significantly contributed to the growth and renewal of Franklin, including the town's transition to a city through annexation in 1960. Included in his robust list of accomplishments during his time as Mayor are the formation of a Redevelopment and Housing Authority, development of a comprehensive plan, and providing assistance in the establishment of various civic, institutional, and commercial developments including Paul D. Camp Community College and the Oak Street Community Center. Jones was selected as First

²⁵Bettie Ridley to Georgia, 12 March 1871. Based on available research at time of this nomination, it is unclear whether this is the same Daniel valued at \$1,000, whom Frank Ridley inherited in 1849.

Citizen of Franklin in 1973 “for his humanitarian, civic, and professional contributions to his community.”²⁹

Criterion A: Agriculture

Rotherwood is eligible for listing on the National Register under **Criterion A: Agriculture** at the local level of significance for its contributions to broad patterns of agricultural history of Southampton County from the early nineteenth century through the mid-twentieth century. Rotherwood served as a plantation as early as 1809, when Thomas Ridley, a Revolutionary War Colonel, identified the property in his will. During the nineteenth century, more than 100 enslaved persons provided agricultural labor and cultivated the crops that contributed to the financial success of the Ridley family and the economic growth of the county. In addition to cultivation of staple cash crops, Rotherwood profited from livestock as well as timber. The c. 1820 outbuilding at Rotherwood warrants further study as it could yield information about antebellum farming activities (although the building could have been used for domestic purposes as well or in addition to farm uses). As with many other farms in Southampton County, agriculture at Rotherwood was able to persist in the late-nineteenth and twentieth centuries through changes in techniques, technologies, and crops. Practices such as tenant farming and leasing land preserved the undivided and profitable land. Increased mechanization and use of commercial fertilizers during the early-to-mid-twentieth century also significantly contributed to the agricultural boom experienced throughout Southampton County, as did the success of crops such as peanuts and soybeans. After World War II, industrialization of farming practices occurred across Virginia, as well as the United States (and the world), in what became known as the Green Revolution. Increased production of wheat, corn, and rice, in particular, spurred widespread societal changes as high-yielding crops could feed growing populations and reduce perennial hunger. Development of effective pesticides also allowed farmers to defeat pests that had decimated other cash crops, such as the boll weevil (which infested cotton in fields) and tobacco beetles (which attacked tobacco as it cured in sheds). Although large commercial farms experienced the highest rates of return by investing in such technology, small family farms also came to rely on them. At Rotherwood, the presence of three c. 1950 metal grain bins, a c. 1950 shed, c. 1970 machine shed, and c. 1970 pole barn are associated with these significant trends in agricultural history.³⁰

Rotherwood was transferred to Darden W. Jones, Farms, Inc., the current owner of record, in 1993, and, as of this writing, the property continues to be used as an operational agricultural estate. The continued agricultural use of the property has preserved its rural agricultural setting

Criterion A: Ethnic Heritage: African-American History

²⁹ “Darden W. Jones,” Southampton-Nansemond County Virginia USGenWeb Archives Obituaries (2000). Accessed August 18, 2022. <http://files.usgwarchives.net/va/southampton/obits/j520d5ob.txt>.

Rotherwood
Name of Property

Southampton Co., VA
County and State

Rotherwood is also eligible for listing under Criterion A in the area of Ethnic Heritage: Black (African-American) for its association with the enslaved African Americans, as well as recent freedmen who lived and worked on the property during the nineteenth century. By 1860, enslaved African Americans made up approximately 48 percent of Southampton County's population. Documentation and extant resources associated with this population, however, remain rare. Therefore, the documentation that exists on the enslaved persons at Rotherwood offers a rare opportunity to further understanding of the history of African Americans in Southampton County. In addition to the named enslaved persons in the Ridley family probate records, the Virginia Death Records Index lists several named individuals, as well as their next-of-kin. Rotherwood's main house and c. 1820 outbuilding are directly associated with the labors of the Black workers held at the property, as are the agricultural fields that remain in production today and the South Field Archaeological Site (44SN0299), which, even with minimal testing, has yielded a range of diagnostic artifacts.

Criterion C: Architecture

Rotherwood is locally significant under Criterion C in the area of Architecture for its collection of nineteenth- and twentieth-century vernacular farm buildings, as well as the Greek Revival-style plantation house. The property reflects both a formal plantation and the vernacular-built environment characteristic of its rural landscape.

Rotherwood
Name of Property

Southampton Co., VA
County and State

Rotherwood's main house is an excellent example of an evolved vernacular dwelling with Greek Revival influences. Typical features of the style present include its symmetrical façade, low-pitched hipped roof, one-bay entry portico with Doric columns and a full entablature, and main entry with a transom and sidelights. Interior finishes, such as the mid-nineteenth century mantels, baseboards, doors, trim around window and door openings, wood flooring, and decorative plaster crown molding are character-defining elements of the Greek Revival style. The central staircase, in contrast, features a Victorian-era newel, balustrade, and railing. Contrary to the more common examples of the Greek Revival style throughout Virginia, which largely include high-style representations emphasizing stone, stucco, and masonry elements, temple-front porticos, and elaborate molding profiles, Rotherwood represents a more modest vernacular design with its emphasis on simple wood-frame design with wood weatherboard siding, wood-framed windows, and a wood-frame entry surround. Overall, the design details are subdued and differ from the highly-stylized examples that are found throughout the Tidewater region. The design and materials of the house further reflect the rural landscape and vernacular construction methods in its use of locally available natural materials.

Although the farm originally contained as many as twelve outbuildings, including a detached kitchen and additional barns that are no longer extant, the property still retains a critical portion of the resources associated with the historic Rotherwood. The outbuildings and structures on the property largely retain their physical elements associated with their original design, including the general architectural features, form, and limited stylized elements. Although some building components have been altered or have deteriorated, the buildings also largely retain their original historic materials. The oldest extant outbuilding on the property likely dates to the first quarter of the nineteenth century based on its hewn and sash sawn framing members, log floor joists, and beaded weatherboard siding fixed with rose head nails. Several elements of the building, including the remaining beaded weatherboard (which appears to have been whitewashed), beaded ceiling joists, and enclosed corner stair suggest that it may have served a more formal purpose.³¹ Outbuilding 1 has been re-roofed and modern drywall and/or plywood boards have been added to the interior, but, though deteriorated, the framing and finishes convey its early craftsmanship. The building is a rare surviving early nineteenth century vernacular agricultural building in Southampton County, and therefore, it contributes greatly to the architectural significance of Rotherwood. The other agricultural outbuildings on the property date between c. 1900-c. 1970. Their utilitarian design and materials is in keeping with the period's transition from hand-built barns, sheds, corn cribs, granaries, and other such resources to use of mass produced materials such as dimensional lumber and corrugated metal, both of which allowed for faster, cheaper construction while resulting in resources that could withstand the hard use typical of large-scale farming.

Archaeological Potential

³¹ Additional archaeological and/or architectural investigation is necessary to determine if the building may have previously served as a dwelling or secondary dwelling. No chimney was observed during the site visit, and it is unlikely that a dwelling would have lacked a heating source.

Rotherwood
Name of Property

Southampton Co., VA
County and State

In December 2010 and February 2011, James River Institute for Archaeology, Inc. (JRIA) conducted archaeological investigations of the area surrounding the main house and of the South Field (Site 44SN0299). Their investigations of the curtilage around the main house provided indications of historic landscaping activities but did not yield significant evidence of below-ground cultural features, although JRIA recommended conducting a ground-penetrating radar (GPR) survey could yield more information. In the South Field, however, JRIA collected and recorded 527 surface artifacts dating from the late-eighteenth century through the nineteenth century. Based on the concentration and patterning of the artifacts, JRIA suggests that this represented the location of Rotherwood's former plantation slave dwellings. Their report explains that this location is consistent with such dwellings on contemporary plantations, and this finding aligns with the documentary evidence that records a high number of enslaved African Americans at Rotherwood during the nineteenth century. Additionally, documentary and archaeological evidence indicates that these quarters continued to be occupied by former enslaved African Americans for a period after Emancipation. JRIA recommended that more extensive archaeological testing be done of the South Field for its potential to yield significant additional information relating to the history of African Americans at Rotherwood. Based on their findings, JRIA also found that the archaeological component of Rotherwood retains sufficient integrity and research potential to contribute to the property's National Register eligibility.³²

Future field investigations and professional testing of the property's extensive acreage may lead to the identification of additional associated historic resources. Based on available data potential, archaeological findings may include conclusively identifying locations of former dwellings for enslaved people, demolished agricultural outbuildings, and a burial site for enslaved African Americans and/or White Ridley family members.

Verbal Boundary Description (Describe the boundaries of the property.)

Rotherwood encompasses 58 acres of the current 191-acre parcel associated with the property. The nominated portion of the property is bounded on the north by Southampton Parkway, the gravel road of the main house south along the treeline to the wooded area south of the South Field, and roughly follows the western parcel line. The true and correct historic boundary is also shown on the attached Sketch Map/Photo Key, which has a scale of 1"=160'.

Boundary Justification (Explain why the boundaries were selected.)

The historic boundary encompasses the primary historic core of the nineteenth century Rotherwood plantation and includes all of its historic agricultural outbuildings and known archaeological sites associated with enslaved African Americans. Areas of the current larger parcel that are excluded from the historic boundary have been farmed in recent years using modern technologies or are the location of residences not associated with the historic Rotherwood plantation. Additionally, the parcel has been divided by modern road construction that is not associated with the significance of Rotherwood. The property's historic setting and all known associated historic resources have been included within the historic boundary.

DISCLAIMER: Records of the Virginia Department of Historic Resources (DHR) have been gathered over many years from a variety of sources and the representation depicted is a cumulative view of field observations over time and may not reflect current ground conditions. The map is for general information purposes and is not intended for engineering, legal or other site-specific uses. Map may contain errors and is provided "as-is". More information is available in the DHR Archives located at DHR's Richmond office.

Notice if AE sites: Locations of archaeological sites may be sensitive the National Historic Preservation Act (NHPA), and the Archaeological Resources Protection Act (ARPA) and Code of Virginia §2.2-3705.7 (10). Release of precise locations may threaten archaeological sites and historic resources.
